 Research group in ontological foundations of knowledge engineering and conceptual modeling. The group performs basic and applied research on the ontological foundations of knowledge engineering and conceptual modeling, exploring the role of ontology in different fields. The group is characterized by a strong interdisciplinary approach that combines Computer Science, Philosophy, and Linguistics, and relies on Logic as an unifying paradigm. On the application side, main emphasis is given on the use of ontologies for electronic commerce, enterprise integration, knowledge management, and information access to the Web
