Kant' s Characterization of Natural Ends

Beisbart, Claus (2009) *Kant' s Characterization of Natural Ends*. In: [\[2008\]: Visiting Fellows, Center for Philosophy of Science. \(2008-2009, Pittsburgh\)](#).

Abstract

What is it to judge something to be a natural end? And what objects may properly be judged natural ends? These questions pose a challenge, because the predicates " natural" and " end" seemingly can not be instantiated at the same time – at least given some Kantian assumptions. My paper defends the thesis that Kant' s " Critique of Teleological Judgment" (CTJ), nevertheless, provides a sensible account of judging something a natural end. On the account, a person judges an object O a natural end, if she thinks that the parts of O cause O and if she is committed to approach O in a top-down manner, as if the parts were produced in view of the whole. The account is non-realist, because it involves a commitment. With the account comes a characterization that provides necessary and sufficient conditions on objects that may properly be judged natural ends. My paper reconstructs the argument in CTJ, § § 64-65 where the account and the characterization are derived.
