Abstract

The present paper is divided in two parts . In the first part we will propose Meinong' s theory of time outlined in 1899 interpreted in such a way that the subtlety of his argumentation is emphasised. In the second, we will discuss different solutions for the celebrated McTaggart' s paradox, reaching the conclusion that a theory of time suggested by the reflections of the Austrian Philosopher seems to be the most adequate perspective for tackling this problem.

Keywords: "McTaggart's paradox" time Meinong
