Abstract

In his recent book *Time and the Metaphysics of Relativity*, William Lane Craig uses the concept of time to try to reconstruct strong conceptual links between theology, metaphysics and physics, three vertices of a triangle that until the 17th century were much less separated than they are today. In this review, I present and critically discuss the main theses of the book.

Keywords: Time, Relativity, Lorentz Invariance, A-Theory of Time, Cosmic Time, Theology

Subjects: [Specific Sciences: Physics: Cosmology](#)
