Economic and Social Research

Our experts in economics, demography, health, education, urban planning, and public financing are well qualified to study the wide range of issues in economic and social policy facing our society. Our multidisciplinary research teams provide policy makers with independent, objective insights regarding a variety of public policies and private sector concerns.

The information and analyses we provide our clients help to inform and improve public policy discourse and advance economic and social development decision making in technology economics and policy, crime and justice, and food and agricultural policy.

We apply our economic and social science expertise in international settings to help government officials at the local, regional, and national levels reach their goals for economic growth, sustainable development, improved public health, democracy, and decentralization. We design, evaluate, and implement policies and programs, and we emphasize training as an integral tool in building sustainability in social development.

Study Shows Action on Climate Change Compatible With Long-Term U.S. Economic Growth

A study by RTI International has found that measures being proposed by the U.S. Climate Action Partnership to curb greenhouse gas emissions are unlikely to affect potential long-term economic growth in the United States.
