# **Agric. Econ. – Czech**

## **Jeníček V.: Global problems of the world – structure, urgency**

Agric. Econ. – Czech, 54 (2008): 63-70

Global problems are very different. The division of global problems into three big groups: Inter-social global problems usually included the problems like the problem of diverting world wars, nuclear, eventually other conflicts connected to the problematic of armament (the problem of war and peace). At present, there gains in importance also the fight towards terrorism. The problem of the social and

economic backwardness of developing countries, eventually the whole North-South relationship also belong there, as well as the problem of solving global debts, the relationship of the indebted and creditors. The problem of the international relationships (namely economic) changes under the new conditions formed namely by the scientific and technological progress. Into the second group of natural-social global problems, there are most often included the following problems: environmental problem, raw material and energy problem, population problem, food, respectively nutrition problem. Lastly, the third group of anthro-social problems includes the general human problems of the social, cultural and humanitarian-ethical nature. Sometimes, they are ranked as one great complex problem (so-called problem of the future of man), sometimes this group is divided into a number (10– 15) of partial “ sub-global” problems the common denominator of which are the shortcomings of the development of man in the relationship to the life and social conditions created by himself. Here belong different kinds of the unequal

approach to education, health care, housing, culture, human rights, eventually also serious defects in their securing or a disharmonic and uncontrolled development (e.g. accelerated urbanisation) etc.

**Keywords:**

global problems, intersocial global problems, natural-social problems, anthropo-social problems
