## **Agro-food exports variety from the Central and Eastern European countries**

Agric. Econ. – Czech, 58 (2012): 1-9

This paper analyses the agro-food exports variety from twelve Central and Eastern European countries (CEECs) to the European Union (EU) during the years 1995– 2007. The panel regression models explain the agro-food exports by

its previous year, income in the importing EU countries, and measure of agro-food export product variety, while the real exchange rate appreciation of the CEEC currencies has negatively influenced agro-food exports. The EU enlargement with the reduction in agricultural protection and the borderless single market has induced agro-food export increases in primary agricultural produce and intermediate food-processed products, but less in higher value-added food-processed differentiated products. The impact of increased number of CEECs agro-food product varieties on agro-food export to the EU is positive.
