Retirement age declines again in 1990s

Murray Gendell

Senior Research Associate, Center for Population Research, Georgetown University, Washington, DC.

The average retirement age resumed its long-run decline in the 1990s after having leveled off during the preceding 10 to 15 years; the resumption of the decline is attributed largely to a rise in the labor force participation rate of older men and women between the mid-1980s and 2000.
