Measuring time at work: are self-reports accurate?

Jerry A. Jacobs

Professor of Sociology, Department of Sociology, University of Pennsylvania

A new measure of work time correlates well with the standard self-reported workweek method; however, a closer look reveals that reference periods — last week, versus last year — do have an impact on some workers in the distribution. This article examines the accuracy of self-reported measures of working time raised by John Robinson and Ann Bostrom in four ways.
