Strong employment gains continue in 1994

Lois M. Plunkert and Howard V. Hayghe

Economists, Office of Employment and Unemployment Statistics, Bureau of Labor Statistics

The labor market turned in a very strong performance, as virtually all sectors and geographic regions enjoyed substantial gains; the largest employment increase in 10 years was accompanied by a steady decline in unemployment. This article takes a detailed look at labor market developments during 1994 based on data from both the [Current Employment Statistics \(CES\) survey](#) and the [Current Population Survey \(CPS\)](#). Its emphasis is on the interrelationship of those developments with trends in the economy.
