#### SYNTACTIC AND LEXICAL CONSTRAINT IN PROSODIC SEGMENTATION AND GROUPING (ABSTRACT)

Jianfen Cao & Weibin Zhu

This paper tries to discuss the interrelation between prosody and syntax by clarifying some syntactic constraints in Chinese prosodic segmentation and grouping. The main attention will be paid to search for (1) possible correlation between prosodic breaks and syntactic construction; (2) possible correlation between prosodic breaks and POS; and (3) the role of syntactic and lexical information in prosodic word chunking. Accordingly, an algorithm for the prediction of prosodic structure based on this information could be formed later on.
