Report of Phonetic Research

A Contrastive Study between Minnan-accented Chinese and Standard Chinese (ABSTRACT)

Aijun Li, Qiang Fang, Ruiyuan Xu Xia Wang, Yunzhong Tang

As we have known, there are many dialects in China. It's worth making a great deal of investigation to contrast the phonetic difference between Standard Chinese and accented Chinese [2]. In this paper, a contrastive study between Minnan-accented Chinese and Standard Chinese are conducted based on the speech corpora being collected. Segments are statistically analyzed for 3 accent-level speakers based on the annotated data of almost 30 speakers. Both citation tonal patterns and tonal combination patterns are compared between the standard Chinese speakers and the mid-level accented speakers.
