### 1. Overview

*The MIT Encyclopedia of the Cognitive Sciences* (MITECS) brings together 471 brief articles on a very wide range of topics within cognitive science. The general editor and six advisory editors in six contributing fields, including Gennaro Chierchia on Linguistics and Language and Michael I. Jordan and Stuart Russell on Computer Intelligence. MITECS opens with excellent overview articles by each of the editors on their fields.

The general quality of the contributors and their contributions is outstanding. The editors secured the cooperation of leading scientists in every area including computational linguistics. Tables 1 and 2 suggest articles that are of particular interest in computational linguistics. The division into sections is that of the book's contents. In the printed volume, the articles are arranged in a single alphabetical sequence.

There are many other articles of immediate interest, including several that compare models popular in CL (Mark Steedman on Categorial Grammar, George Lakoff on Head-Driven Phrase Structure Grammar, and Mary Dalrymple on Lexical Functional Grammar) and several that treat computational simulations of psychological phenomena. Dennis Norris's general article on computational psycholinguistics focuses nicely on interdisciplinary issues; it motivates why a range of computational models remain interesting within cognitive science when language is the subject of investigation.

### 2. Cognitive Science or Cognitive Sciences?

It is noteworthy that the editors do not attempt a general overview article on cognitive science, and that MITECS promises information on the cognitive sciences (plus). This suggests a fragmented view of the field, which, coming from its greatest advocates, must be taken seriously. It is also reflected in the relatively little attention given specifically to cognitive issues in many of the articles (for example, the articles

<sup>1</sup> Buyers of the printed volume can apply for on-line access to the full text of the book at <http://cognet.mit.edu/MITECS/>; others may browse a list of the articles, and their abstracts and bibliographies.
