摘要:

建立一个食饵具有疾病的生态 流行病模型,讨论了该模型平衡点的存在性,并利用特征根法对边界平衡点进行局部渐近稳定性分析,通过构造Liapunov函数得到了两个边界平衡点的全局渐近稳定性和正平衡点的局部渐近稳定性的充分条件.

关键词: 平衡点; 局部渐近稳定; 全局渐近稳定

Analysis of Predator Prey Model with Disease in the Prey

Abstract:

A predator prey model with disease in the prey was established and analysed. The existence of the equilibrium points and the boundedness of solution were studied. The sufficient condition of the local asymptotical stability of the boundary equilibrium was studied with the method of latent root, and furthermore, the global asymptotical stability of two boundary equilibrium points, and the local asymptotical stability of the positive equilibrium point were analyzed, with the sufficient condition of their stability obtained.

Keywords: equilibrium locally asymptotical stability global asymptotical stability
