摘要 图的临界群是图生成树数目一个加细,图的临界群的阶数恰为该图的生成树的数目.确定了一些具有较多边数图如 $Kn-K_1$, m , $Kn-Km$, $Kn-mK2$, Kn , $n-nK2$ 的临界群的结构,证明了这些图的临界群不是一个循环群,而是多个循环群的直和.

关键词: 图的Laplacian矩阵 临界群 群的Smith标准形

Abstract: The critical group of a connected graph is a finite abelian group whose order is the number of spanning trees in the graph and is closely related to the graph Laplacian. In this paper, the critical groups for some graphs with large number of edges, such as $Kn-K_1$, m , $Kn-Km$, $Kn-mK2$, Kn , $n-nK2$, are determined completely.

Key words: graph laplacian critical group the Smith normal form
