# Sources of log canonical centers

János Kollár (Princeton Univ)

(Submitted on 14 Jul 2011 (v1), last revised 14 Nov 2012 (this version, v3))

We define the "source" and the "spring" of a log canonical center and use them to solve several problems in higher-codimension adjunction. The main application is to the construction of semi log canonical pairs.

Version 2: References updated. Version 3: Many small changes.

Subjects: Algebraic Geometry (math.AG)
