摘要 研究一个四阶两点边值问题解的存在性,其中非线性项是Caratheodory函数并且包含了未知函数的各阶导数.在力学上,此问题表述了两端简单支撑的弹性梁的挠曲.

关键词: 奇异普通微分方程 边值问题 存在性 不动点定理

Abstract: The existence of solution for a fourth-order two-point boundary value problem is studied, where the nonlinear term is a Carathéodory function and contains all lower order derivatives of the unknown function. In mechanics, the problem describes the deflection of an elastic beam simply supported at both ends.

Key words: singular ordinary differential equation boundary value problem existence fixed point theorem
