

Connecting curves for dynamical systems

R. Gilmore, Jean-Marc Ginoux, Timothy Jones, C. Letellier, U. S. Freitas

(Submitted on 8 Mar 2010)

We introduce one dimensional sets to help describe and constrain the integral curves of an n dimensional dynamical system. These curves provide more information about the system than the zero-dimensional sets (fixed points) do. In fact, these curves pass through the fixed points. Connecting curves are introduced using two different but equivalent definitions, one from dynamical systems theory, the other from differential geometry. We describe how to compute these curves and illustrate their properties by showing the connecting curves for a number of dynamical systems.
