

Two distance-regular graphs

[Andries E. Brouwer](#), [Dmitrii V. Pasechnik](#)

(Submitted on 3 Jul 2011)

We construct two families of distance-regular graphs, namely the subgraph of the dual polar graph of type $B_3(q)$ induced on the vertices far from a fixed point, and the subgraph of the dual polar graph of type $D_4(q)$ induced on the vertices far from a fixed edge. The latter is the extended bipartite double of the former.
