Abstract: In this paper, we prove an existence and uniqueness result for solutions of some bilateral problems of the form

$$\begin{cases} \langle Au, v - u \rangle \geq \langle f, v - u \rangle, \forall v \in K \\ u \in K \end{cases}$$

where A is a standard Leray-Lions operator defined on $W_0^1 L_M(\Omega)$, with M an N-function which satisfies the Δ_2 -condition, and where K is a convex subset of $W_0^1 L_M(\Omega)$ with obstacles depending on some

Carathéodory function $g(x, u)$. We consider first, the case

$f \in W^{-1} E_{\overline{M}}(\Omega)$ and secondly where $f \in L^1(\Omega)$. Our method deals

with the study of the limit of the sequence of solutions u_n of some

approximate problem with nonlinearity term of the form

$$|g(x, u_n)|^{n-1} g(x, u_n) \times M(|\nabla u_n|).$$
