

Some triviality results for quasi-Einstein manifolds and Einstein warped products

Paolo Mastrolia, Michele Rimoldi

(Submitted on 3 Nov 2010)

In this paper we prove a number of triviality results for Einstein warped products and quasi-Einstein manifolds using different techniques and under assumptions of various nature. In particular we obtain and exploit gradient estimates for solutions of weighted Poisson-type equations and adaptations to the weighted setting of some Liouville-type theorems.
