High Photon-Number Squeezing in Strong Field Limit

QIAN Feng, HUANG Hong-Bin, and QI Guan-Xiao

Department of Physics, Southeast University, Nanjing 210096, China (Received: 2005-9-2; Revised:)

Abstract: We show that high photon-number squeezing in bright light can be generated in both lasers and optical bistabilities by the injections of a squeezed vacuum and a classical field, and the high squeezing is maintained for very strong field.
