(Received: 2002-6-29; Revised: )

Abstract: Abundant new soliton-like and period form solutions for certain (3+1)-dimensional physically important nonlinear evolution equations are obtained by using a further extended tanh method and symbolic computation system, Maple.

PACS: 03.40.Kf, 02.30.Ik, 05.45.Yv

Key words: extended tanh method, soliton-like solution, period form solutions, (3+1) KP equation
