A unified stability property in spin glasses

Dmitry Panchenko

(Submitted on 20 Jun 2011 (v1), last revised 3 Nov 2011 (this version, v3))

Gibbs' measures in the Sherrington-Kirkpatrick type models satisfy two asymptotic stability properties, the Aizenman-Contucci stochastic stability and the Ghirlanda-Guerra identities, which play a fundamental role in our current understanding of these models. In this paper we show that one can combine these two properties very naturally into one unified stability property.
