The first edition of the International Meeting on Electrogenerated Chemiluminescence was held in Bertinoro (ITALY) in September 2014. In 2016, the second edition will take place in Bordeaux (FRANCE) from 29th to 31st of August as a satellite meeting of the 67th annual meeting of the International Society of Electrochemistry. The goal of this conference on Electrogenerated Chemiluminescence (ECL) is to gather the large and exciting variety of current research activities in this field. The meeting will address fundamental aspects, recent developments, bioanalytical and real applications of ECL. Therefore we wish to cover all modern aspects of ECL (NPs, QDs, molecular probes, theory, simulation, new systems and strategies, nanomaterials, novel applications, devices, hyphenated techniques, etc.). The purpose of ECL'2016 is thus to bring together the leading scientists working in all the aspects of ECL, in order to stimulate intensive discussions, initiate cooperations, and improve the personal exchanges regarding this topic. Participation of young scientists (PhD, Students and Post-Docs) is particularly encouraged.
