(Received: 2004-1-19; Revised:)

Abstract: The effect of surface delta-interaction (SDI) in nucleon-pair shell model truncated to an SD-subspace is studied. The results show that with the single-particle level splitting fully taken into account, for realistic SDI strength, the surface delta-interaction also enhance the E2 and M1 transitions of low-lying states.

PACS: 21.60.Cs,

Key words: nucleon-pair shell model, surface delta-interaction, spectrum, E2 and M1 transitions
