**摘要** 使用蒙特卡罗直接模拟程序计算了弱源点火条件下超瞬发临界 $5\%$ 的Godiva I 快中子脉冲堆缓发中子发射率规律和脉冲引发时刻概率分布。计算结果表明, 脉冲引发时刻概率分布的计算结果与实验结果符合较好, 所获得的缓发中子发射率规律可合理解释引发时刻概率分布的实验结果。

关键词 持续裂变链 引发时刻 缓发中子 蒙特卡罗直接模拟 超瞬发临界

**Abstract** Emission rates of delayed neutrons and burst initiation time for Godiva I burst assembly in the presence of weak neutron source, whose reactivity was 5% above prompt criticality, were calculated using analog Monte-Carlo method. The result of initiation time is consistent with experiment. Emission rate of delayed neutron attained from calculation can well explain the probability distribution of initiation time.

**Key words** persistent fission chain initiation time delayed neutron analog Monte-Carlo method super-prompt-critical
