

# Finite-time synchronization of non-autonomous chaotic systems with unknown parameters

Jianping Cai, Meili Lin

(Submitted on 2 Nov 2009)

Adaptive control technique is adopted to synchronize two identical non-autonomous systems with unknown parameters in finite time. A virtual unknown parameter is introduced in order to avoid the unknown parameters from appearing in the controllers and parameters update laws. The Duffing equation and a gyrostat system are chosen as the numerical examples to show the validity of the present method.
