Forward equations for option prices in semimartingale models

Rama Cont, Amel Bentata

(Submitted on 8 Jan 2010 (v1), last revised 12 Jan 2010 (this version, v2))

We derive a forward partial integro-differential equation for prices of call options in a model where the dynamics of the underlying asset under the pricing measure is described by a -possibly discontinuous- semimartingale. This result generalizes Dupire's forward equation to a large class of non-Markovian models with jumps.
