摘要 以HMFC[(反)-肉桂酰基二茂铁缩(S)-甲基二硫代碳酰脲]与HBFC[(反)-肉桂酰基二茂铁缩(S)-苄基二硫代碳酰脲]两种Schiff碱分别与醋酸镉[Cd(OAc)<sub>2</sub>•2H<sub>2</sub>O]、醋酸汞[Hg(OAc)<sub>2</sub>]反应,合成了6

个未见文献报道的配合物Cd(MFC)<sub>2</sub>•H<sub>2</sub>O, Cd(MFC)•OAc, Cd(BFC)<sub>2</sub>, Hg(MFC)<sub>2</sub>, Hg(MFC)•OAc, Hg(BFC)<sub>2</sub>,

考察了其物理性质,并利用元素分析、IR, <sup>1</sup>H NMR及摩尔电导表征了其组成、可能结构,推断了配位过程.

结果表明:这两种Schiff碱都是反式双齿配体,经烯硫醇化并失去质子后,以负硫离子与过渡金属离子形成共价键,氮原子与中心金属离子形成配位键.

**Abstract** Six complexes of two Schiff bases, methyl 1-ferrocenylcinnamylidene hydrazinodithiocarboxylate (HMFC) and benzyl 1-ferrocenylcinnamylidene hydrazinodithiocarboxylate (HBFC), with M(OAc)•nH<sub>2</sub>O [M=Cd(II) or Hg(II), n=2, 0], Cd(MFC)<sub>2</sub>•H<sub>2</sub>O, Cd(MFC)•OAc, Cd(BFC)<sub>2</sub>, Hg(MFC)<sub>2</sub>, Hg(MFC)<sub>2</sub>•OAc and Hg(BFC)<sub>2</sub>, have been synthesized and characterized by elemental analysis, molar conductance, IR and <sup>1</sup>H NMR spectrum measurements. The possible coordinating process and complex structures have been discussed. It was found that two ligands are bidentate ones with *trans* configuration coordinating to the metal ions via nitrogens and sulfur atoms after their tautomerization of thione to thiol and deprotonation of the thiol.
