

1. **Introduction**

This document provides a detailed analysis of the dataset used for the 2013 International Conference on Privacy, Security and Trust (CPSec 2013). The dataset consists of three main components: star counts and cluster size, star count section, and star section.

2. **Star Counts and Cluster Size**

The star counts and cluster size section contains information about the number of stars assigned to each cluster and the size of each cluster. This section is located at the top of the dataset file.

3. **Star Count Section**

The star count section contains a table with two columns: 'Cluster ID' and 'Star Count'. The 'Cluster ID' column lists the unique identifier for each cluster, and the 'Star Count' column lists the number of stars assigned to that cluster. This section is located below the star counts and cluster size section.

4. **Star Section**

The star section contains a table with four columns: 'Cluster ID', 'Star ID', 'Star Name', and 'Star Description'. The 'Cluster ID' column lists the unique identifier for the cluster containing the star, the 'Star ID' column lists the unique identifier for the star, the 'Star Name' column lists the name of the star, and the 'Star Description' column lists a brief description of the star. This section is located at the bottom of the dataset file.
