

## Variable G correction to statefinder parameters of dark energy

<http://www.firstlight.cn> 2010-10-01

Motivated by several observational and theoretical developments concerning the variability of Newton's gravitational constant with time  $G(t)$ , we calculate the varying  $G$  correction to the statefinder parameters for four models of dark energy namely interacting dark energy, holographic dark energy, new-agegraphic dark energy and generalized Chaplygin gas.
