摘要:

目的:利用硝酸银硅胶填料有效分离出血浆混合脂肪酸中的亚油酸。方法:通过改进的FOLCH法提取血浆总脂后,再采用皂化、酸化水解的方法将总脂转化为混合脂肪酸。用ghosh法将硅胶改性为硝酸银硅胶后,以亚油酸为对象,通过静态吸附试验了解硝酸银硅胶对不饱和脂肪酸的吸附特性,采用柱层析的方法分离血浆混合脂肪酸中的亚油酸。结果:血浆与有机溶剂在1: 5时既能有效萃取血浆总脂,用正己烷: 二氯甲烷: 乙醚=89: 10: 1作为洗脱剂,将洗脱液甲酯化后进行GC和GC-MS检测,硝酸银硅胶柱的洗脱液中亚油酸的纯度60.74%,硅胶柱的为23.65%,不饱和脂肪酸得到了较好的纯化。

Abstract:

A rapid and efficient method for separation of unsaturated fatty acid is described as the FOLCH method that is extract total lipids of blood plasma with 1: 20 blood plasma to extracantant (methanol: chloroform=1: 2). The method is modification from it that allows the proportion of blood plasma to extracantant(methanol: dichloromethane=1: 2)reducing from1: 20 to 1: 5. we prepared silver nitrate-silica gel by the Ghosh method, and, drew the adsorption isotherm of linoleic acid to understand the character of silver nitrate-silica gel for adsorbing unsaturated fatty acid. In addition, fatty acids were eluted with a mixture of n-hexane: dichloromethane: ethyl ether=89: 10: 1 after the sample has been loaded column. After that, linoleic acid was quantitatively analysed and the others fatty acids were qualitatively analysed by GC and GC-MS. There are distinct differences for purification of linoleic acid and the others fatty acids in the eluent, the silver nitrate-silica gel can well purified unsaturated fatty acids in blood plasma.
