**Abstract:** The investigation area is within the C2 grid-square and located within Burdur province. This research was conducted between 1999 and 2002. Nearly 1000 plant specimens were collected and 413 Spermatophyta taxa belonging to 55 families were identified from these specimens. Among the identified taxa, 3 are from Gymnospermae, and 410 from Angiospermae (51 of the Angiospermae are Monocotyledones and 359 are Dicotyledones members). The number of endemic taxa was 83 and this number constitutes 20.1% of the total flora.
