摘要 *Myrmechis bakhimensis* D. Maity, N. Pradhan & G. G. Maiti (Orchidaceae), a new species from Sikkim Himalaya, is described and illustrated. The new species most closely resembles *M. japonica* (Reichb.) Rolfe and *M. chinensis* Rolfe with similar shape and size of lamina and the “T”-shaped epichile, but differs by the perfectly glabrous and eciliate floral bract, 5-nerved dorsal sepal, and emarginate, mucronate epichile.
