Süleyman Demirel Üniversitesi, Eğirdir Su Ürünleri Fakültesi, Isparta - TURKEY

Abstract: *Chaetomorpha crassa* (C.Ag.) Kütz. was sampled from the brackish water of Beymelek Lagoon (Antalya). During the seasons in which the water temperature is between 18.9°C (autumn) and 23.4°C (summer), the development density of this species in this area is considerably higher than at other times.
