Abstract: Investigations of the inland water bodies of southeast Azerbaijan (mainly near the city of Lenkoran and its suburbs) yielded 11 additional species of freshwater testate amoebae. Among these, 7 species (*Oopyxis lenkoranica* sp.n., *Pentagonia azerbaijanica* sp.n., *Diffugia lenkoranica* sp.n., *D.talyshica* sp.n., *D.sapnakeranica* sp.n., *D.pressula* sp.n., and *D.girkanica* sp.n.) are new to science. Descriptions of all 11 species are given.

Key words: Freshwater testate amoebae, fauna, Azerbaijan
