**Abstract:** This study aimed to identify 68 aphid species and subspecies in Kahramanmaraş from 1998 to 2001. It was found that these species and subspecies were from 35 genera and the subfamilies Aphidinae, Chaitophorinae, Lachninae, Myzocallidinae, Pemphiginae and Pterocommatinae (Aphididae: Aphidoidea). Sixty-eight species, belonging to the tribes Aphidini-Aphidina, Aphidini-Rhopalosiphina, Macrosiphini, Chaitophorini, Cinarini, Lachnini, Myzocallidini, Eriosomatini, Fordini, Pemphigini and Pterocommatini, were examined. *Aphis acetosae* L., *Aphis fabae mordvilkoii* Börner and Janich, *Cinara cupressi* (Buckton) and *Nurudea meitanensis* (Tsai and Tang) are reported for the first time from Turkey.

**Key Words:** Aphididae, Survey, Kahramanmaraş, Turkey
