**Abstract:** Male and female specimens of *Brachypoda mutila* and male specimens of *Bandakia concreta* collected from a seepage spring in West Anatolia are described. Their morphological features are compared with those of the most closely related species. Identification keys to the species known from the Palearctic of the genera *Bandakia* and *Brachypoda* are provided.

**Key Words:** Acari, Hydrachnidia, Brachypoda, Bandakia, Turkey
