Cladocera and Copepoda (Crustacea) Fauna of Lake Terkos (Durusu)

Hüseyin GÜHER

Department of Biology, Faculty of Arts and Sciences, University of Trakya, 22030, Edirne -TURKEY

Abstract: Field studies were conducted by taking samples vertically and horizontally during a specific period of each month between April 2000 and March 2001 in Lake Terkos. A total of 28 species belonging to six families of Cladocera and 13 species from seven families of Copepoda are identified. Their known geographical distribution in Turkey have been given according to provinces.
