Abstract: In the present study, the zooplanktonic fauna of the Kunduzlar and Çatören dam lakes (Kirka basin-Eskişehir) was investigated during August 1994-June 1995. Eight species of Rotifera, five species of Cladocera and two species of Copepoda were identified in both dam lakes. In addition, the mean zooplankton abundance (ind. m⁻³) and physical and chemical parameters of dam lakes were given.

Key Words: Zooplankton, Cladocera, Copepoda, Rotifera, Abundance, Kunduzlar Dam Lake, Çatören Dam Lake.
