Background information for the

management program (Atmp) Agro-expert

Res. Agr. Eng., 50 (2004): 342-40

Economic efficiency in farming is achieved as a result of manager's skills and proper technologic equipment available on the farm suitable for carrying out husbandry operations. Applying skilled management to the whole business of farming is of an extraordinary importance, too. The manager should be equipped with more or less sophisticated software that would make his decision making process more professional and adequate to (generally) production conditions. Such software (program) will allow proving his technological conception by economic calculations and proper tests. An Agricultural Technology Management Program AGRO-EXPERT has been conceived and discussed in this paper. The authors analyze situation in appearance of such program and conditions/information necessary for their correct (adequate) functions.
