Prethodno priopćenje

Roundwood flow analysis in Slovenia

Mitja Piškur
Nike Krajnc

[Puni tekst \(Engleski\)](#) Str. 39 - 46 (pdf, 212.57 KB) downloads: 302

Sažetak

On the basis of roundwood flow model, two roundwood balances were prepared. A wide range of available data was taken into consideration; data quality was evaluated and a proposal for improving their quality developed. Results of roundwood balance in the reference year 2004 showed that if official data for annual removals are considered, a lack of 536,000 m³ occurs. In the case of modelled (enlarged) removals, a roundwood balance is positive. Wood flow and data analysis should play an important role as part of strategic planning and decision making at sectorial, local, regional and national levels.

Ključne riječi

roundwood; roundwood balance; roundwood flow analysis; MFA; forest industry; home consumption; Slovenia
