摘要:

利用动电位极化曲线和交流阻抗谱等电化学测量技术研究了Q235钢表面原位生长的α-FeOOH膜在0.25 mol/L Na<sub>2</sub>SO<sub>4</sub>+10-4 mol/L NaCl、0.25 mol/L Na<sub>2</sub>SO<sub>4</sub>+10-3 mol/L NaCl、0.25 mol/L Na<sub>2</sub>SO<sub>4</sub>+10-2 mol/L NaCl水溶液中的电化学性能.在不同浓度的Cl<sup>-</sup>溶液中α-FeOOH膜对侵蚀性离子的作用机制.结果表明, Q235钢表面原位生长的α-FeOOH膜在10-4 mol/L 到10-2 mol/L Cl<sup>-</sup>浓度范围内, 对基材均无保护作用; 但当Cl<sup>-</sup>含量为10-2 mol/L时, α-FeOOH膜的膜电阻及转移电阻皆比低氯离子浓度的要大, 此时α-FeOOH膜表现出一定的抗腐蚀能力.

Abstract:

In this paper, the electrochemical characteristics of an in-situ formed α-FeOOH film on Q235 steel have been investigated by means of potentiodynamic polarization and EIS measurements in several Cl<sup>-</sup> containing solutions such as 0.25 mol/L Na<sub>2</sub>SO<sub>4</sub>+10-4 mol/L NaCl, 0.25 mol/L Na<sub>2</sub>SO<sub>4</sub>+10-3 mol/L NaCl and 0.25 mol/L Na<sub>2</sub>SO<sub>4</sub>+10-2 mol/L NaCl. The results indicate that the α-FeOOH film formed in situ on Q235 provides no protectiveness to the steel substrate in a solution with 10-4 mol/L Cl<sup>-</sup>. When the Cl<sup>-</sup> concentration reached to 10-2 mol/L, the R<sub>film</sub> and R<sub>t</sub> of the in-situ formed α-FeOOH film on Q235 were larger than those in solutions with lower Cl<sup>-</sup> concentration, in such case the film shows protectiveness to the substrate steel to some extent.

Keywords: α-FeOOH film in-situ growth Cl<sup>-</sup> concentration protectiveness
