基于局域表面等离子体增强的NaYF₄: Yb/Er荧光上转换及其应用

努尔尼沙·阿力甫, 金崇君

中山大学理工学院光电材料与技术国家重点实验室, 广东 广州 510275

摘要: 阐述了局域表面等离子体共振增强荧光上转换的相关机制, 并以此为基础总结了三种调节机制和四种上转换/金属复合材料结构。具有明显增强效果的上转换/金属结构复合材料大致分为四种: 掺入Au和Ag纳米颗粒的稀土掺杂基质; core/shell结构; 稀土掺杂的NaYF₄靠近金属颗粒或金属纳米线所形成的gap结构; 周期性金属阵列结构。最后介绍了它们在生物医学和光电子器件领域的应用进展。

LSPR-enhanced upconversion luminescence of NaYF₄:Yb, Er nanoparticles and its application

Nuernisha Alifu, JIN Chong-jun

State Key Laboratory of Optoelectronic Materials and Technologies, School of Physics and Engineering, Sun Yat-sen University, Guangzhou 510275, China

Abstract:

Localized surface plasmon resonance (LSPR) supported by metal nanoparticles or connected nanostructures was demonstrated as a powerful scheme to enhance the upconversion luminescence signals of upconversion nanoparticles (UCNPs). Three modulation mechanisms of LSPR and four types of UCNPs/metallic nanostructures were introduced. The UCNPs/metallic nanostructures which remarkably enhance upconversion luminescence are: Rare-earth-doped substrate doped by Ag and Au nanoparticles, core/shell structure, gap structure formed of small

distance between rare-earth-doped NaYF₄ and metal nanowires, periodic structure of metal arrays. At last, recent advances were reviewed in applications of these UCNPs/metallic structures in biomedical and optoelectronic devices.

Keywords: materials upconversion luminescence localized surface plasmon resonance metal nanoparticles plasmon-coupled emission
