摘 要：

在金电极上静电沉积壳聚糖铂纳米颗粒，采用壳聚糖包埋固定葡萄糖氧化酶构建葡萄糖生物传感器。实验结果表明：制得的葡萄糖生物传感器响应时间小于7s，线性测量范围为 $1 \times 10^{-5} \sim 0.6 \times 10^{-3}$ mol/L，检测限为 1×10^{-6} mol/L。该传感器灵敏度高，稳定性好。

Electrodeposition of chitosan-platinum nanoparticle biocomposite onto gold electrode for glucose sensing

Author's Name:

Institution:

Abstract:

Chitosan-pt nanoparticles deposited on the gold electrode by electrodeposting, then glucose oxidase was immobilized on the surface of modified electrode by chitosan embedding. The result showed that the biosensor exhibited a fast amperometric response (<7s) to glucose. The linear range for glucose detection was $1 \times 10^{-5} \sim 0.6 \times 10^{-3}$ mol/L. The detection limit for glucose was 1×10^{-6} mol/L. The biosensor had more sensitivity and more stability.

Keywords: cyclic voltammetry, biosensor, glucose oxidase, Pt nanoparticles, Chitosan
