

A Life Devoted to Innovation in IT

<http://www.firstlight.cn> 2008-12-31

Since the beginning of her career, innovation has been a common denominator in all the projects Radia Perlman has taken part in. Thanks to her great ability to innovate she has made significant contributions to computer science; indeed her development of the spanning-tree protocol has caused her to be widely regarded as “The Mother of the Internet”. During this press conference, which lasted an hour and a quarter, she informed and entertained her audience with her experiences and opinions on a range of subjects. We would like to give our readers the opportunity to enjoy the conference as much as her audience did.
