Quality of Goals - a key to the human-oriented technology

Barbara Begier

Abstract

A kind of an essay on some social and ethical impact of new technologies has been given in the first five sections. The next two sections bring a study on quality referred to the software process. Then some ethical issues are presented in the context of IT development and computer applications. The need for a quality of goals has been emphasized. Human objectives should gain the top position, especially in a coming post-computer era. Some conceptual research in the topic of quality of goals has been suggested to safe humanistic values.
