摘要

文中提出了一种基于分类预测的三维SPIHT算法, 并对多光谱1~7波段图像进行了压缩实验。首先对图像数据作三维变换, 空域采用浮点97小波去除相关性, 谱域分类预测去除冗余; 再根据分类预测算法获得系数的残差图像, 并对残差图像进行三维SPIHT编码; 而对分类预测时得到的码书和索引表进行哈夫曼无损压缩; 将这3个编码文件传送到解码端用于图像重构。实验证明该算法具有很好的重构效果。

Abstract

The paper presents an algorithm based on classification and 3D-SPIHT for 1~7 bands multispectral images compression. First, the 3D transform for the image data is used with CDF97 wavelet to move spacial correlation and classification prediction to move spectral correlation. Second, according to remain image coefficients from classification prediction, the method realizes compression coding by 3D-SPIHT and adopts Huffman coding files to do the lossless coding of codebook and index table. Meanwhile it transmits all coding files to the decoding so as to reconstruct image. The results of numerous experiments indicate the quality of reconstructive image.
