The Australian Government's Abandoned Infrastructure Outsourcing Program: what can be learned?

Anne Rouse

Abstract

Early in 2001, after a damning public report by the Auditor-General, the Australian Federal Government abandoned its highly promoted "whole of government" IT infrastructure outsourcing initiative. This about-face was greeted in the press with reports that the initial conducted by the authors suggests a more complex picture. Like many other "selective" outsourcers of IT, the Federal Government had been led to believe that it was adopting a relatively low risk strategy that it would, if well managed, lead to significant cost savings implemented many widely promoted "best practices", the Federal Government found a substantial discrepancy between what outsourcing promised to deliver, and what was actually achieved. In this respect their expert encreases were no different from those of many of outsourcing, who responded to a substantial contemporaneous survey. This case study examines why the Government's expectations were not achieved, and arrives at conclusions that have important implications for decision makers confronted with choices about standard arrives at conclusions that have important implications for decision makers confronted with choices about standard arrives at conclusions.
